## Compilación de Bernese

Se desarrolla a continuación un paso a paso del testing para encontrar el error de configuración del programa Bernese.

Se debe ingresar a al servidor para poder ejecutar Bernese. Las entradas a Bernese vienen de las salidas RINEX de BNC.

Al configurar Bernese en la terminal se produce un error al compilar los programas, que están escritos en FORTRAN. Observando el archivo COMPLINK.log se infiere que el error proviene del archivo configure.pm

```
CONFIGURATION OF THE BERNESE GNSS SOFTWARE

1 ... Update LOADGPS.setvar
2 ... Install online updates
3 ... Add a new user environment
4 ... Compile the menu
5 ... Compile the programs
6 ... Install the example campaign
7 ... ---

x ... Exit

Enter option: 5

Running the compilation of the Fortran programs.
This can take a while...
It depends on the computer performance.

All compilation output is redirected into file
/usr/local/BERN52/GPS/EXE/COMPLINK.log
```

## Corriendo makemake.pl

```
- adding the parameter '--path=' when calling configure.pm

| Imateo@gps1:/usr/local/BERN52/GPS/EXE$ sudo makemake.pl
| sudo: makemake.pl: orden no encontrada
| vlmateo@gps1:/usr/local/BERN52/GPS/EXE$ sudo perl makemake.pl
| Can't locate cmp_util.pm in @INC (you may need to install the cmp_util module) (@INC con tains: /EXE /etc/perl /usr/local/lib/x86_64-linux-gnu/perl/5.30.0 /usr/local/share/perl/5.30.0 /usr/lib/x86_64-linux-gnu/perl/5.30 /usr/share/perl/5.30 /usr/share/perl/share/perl/share/perl/share/perl/share/perl/share/perl/share/perl/share/perl/share/perl/share/perl/share/perl/share/perl/share/perl/share/perl/share/perl/share/perl/share/perl/share/perl/share/perl/share/perl/share/perl/share/perl/share/perl/share/perl/share/perl/share/perl/share/perl/share/perl/share/perl/share/perl/share/perl/share/perl/share/perl/share/perl/share/perl/share/perl/share/perl/share/perl/share/perl/share/perl/share/perl/share/perl/share/perl/share/perl/share/perl/share/perl/share/perl/share/perl/share/perl/share/perl/share/perl/share/perl/share/perl/share/perl/share/perl/share/perl/share/perl/share/perl/share/perl/share/perl/share/perl/share/perl/share/perl/share/perl/share/perl/share/perl/share/perl/share/perl/share/perl/share/perl/share/perl/share/perl/share/perl/share/perl/share/perl/share/perl/share/perl/share/perl/share/perl/share/perl/share/perl/share/perl/share/perl/share/perl/share/perl/share/perl/share/perl/share/perl/share/perl/share/perl/share/perl/share/perl/share/perl/share/perl/share/perl/share/perl/share/perl/shar
```

Dentro de makemake me dice que permiso denegado, hay un módulo que no tengo (cmp\_util). Trato de modificar la línea 49, donde están los includes. En la línea 49 están los compiladores de Fortran, no la librería cmp\_util que es la que estoy buscando, entonces se descarta esta opción.

Según <a href="https://stackoverflow.com/questions/14402074/cant-locate-new-pm-in-inc">https://stackoverflow.com/questions/14402074/cant-locate-new-pm-in-inc</a> el error está en que puede que no esté la librería en la que esté configure.pm incluída, reviso si la línea 30 apunta correctamente ahí. Esta línea debería apuntar a ENV y la variable X debería ser /usr/local/BERN52/GPS/

```
Archivo Editar Opciones Buscar Ayuda
              5 2 C
                          9 9 >

Whart VO "+ (C) /MENIII
```

Modificando el archivo makemake.pl donde incluye la librería:

Una segunda opción es que el error está en use o qw (ver argumentos del compilador)

QW se usa para pasar una lista de strings como un array de elementos

```

```

Debo buscar cual es el modulo e instalarlo dentro de PERL con cpan:

Cpan-> install cmp\_util

Esta instalado el modulo, no lo encuentra. Está en la misma carpeta que el makemake.pl o el tmp util.pm

Cuando corro el makemake.pl con sudo no encuentra el cmp util.

En menú.pro ->menú.tmp (donde está) no encuentra el paquete: qmake: could not exec '/usr/lib/qt5/bin/qmake': No such file or directory

No se encuentra el qmake. Corro sudo apt-get install qt5-qmake (ver si al instalar prosigue el error)
